glass finish
interior

Intro

Glass Finish is the unique and very distinct coating system, which enriches and animates a solid colour. Created by a layer of spherical glass embedded into the outer film level of an adhesive membrane, **Glass Finish** provides a translucent and light-refractive coat that re-defines a base coat colour. It is due to the spherical nature of the glass that light is absorbed and dispersed, activating the surface with luminosity and a frosting effect, depending on the viewing angle, while enhancing the base colour.

Durable and decorative, **Glass Finish** is a wipeable surface that delivers excellent performance in high traffic areas with dynamic surface light play.

Preparation and Application

This is an applicator-based finish. For wall surfaces, the on-site process involves the use of a hopper gun.

Recommended Uses

Glass Finish is suitable for commercial and residential interior walls or any dimensionally stable object.

From hotel foyers, cinemas, nightclubs, restaurants, boardrooms to the domestic setting of walls within a lounge room or entry or foyer of a residential house, entrance Glass Finish is interpreted in a range of ways.

Colours

Glass Finish is available in all standard and custom colours.

Services

As an applicator based finish, please consult with Covered in Paint regarding the Glass Finish.
